

Astronomy News

By Bruno Martel
Cégep de Saint-Félicien

In science courses, teachers are always looking for ways to get students interested and involved. They also try to integrate learning and to give some meaning to their teaching. It is in this perspective that we came up with *Astronomy News*.

This activity is conducted as part of the complementary course *Exploring and Understanding the Universe (203-FSW-03)*. Students who register are from the following programs: *Social Science, Arts and Literature, Business Administration Techniques, Wood Processing Techniques and Exploration*.

Although the activity was developed in a complementary course, it can be used in any science course. Since presentations are based on a reflection on connections between science, technology and society, there is an interest for students at any stage of their training.
