

Controversies in Human Biology

By Sébastien Paradis

Cégep de Ste-Foy

The teacher presents a controversy for each of the four topics in the course curriculum (male reproductive system, female reproductive system, sexual relation and muscular system).

Two teams work on each controversy for two weeks. They must learn about the subject, understand how the system works, and take a position on the controversy. The members of each team then present their positions and arguments, and explain the contents of the issue to their class colleagues, using a poster. Presentations are followed by a discussion.
